

KREYENBORG 

MIXERS and SILOS

Universal Mixer

This type of mixer can be used where easy flow products are to be mixed accurately, quickly and at low cost (including feed stocks with different bulk densities).

Suitable for food, feed and plastics applications.

Special models available for powders and master-batches.

Stainless steel construction also available.

Film Flake silos

Light products such as film flakes easily tend to bridge when being discharged, because of the relatively low bulk density of the flakes. The film flake silo eliminates bridging.

Fibre Silos

This silo is primarily designed for the storage of extremely light and quickly bridging fibres. The bulk density of such fibres may be far less than 0.1kg ltr.

Block Silo

for storage and complete discharge of ground material stock such as film flakes, cut fibres and foams etc.

The special Block Silo, which can be used for a wide variety of different materials, is compact and space saving with large capacity and low height.
